

Supplementary Fig. 1. Distribution of propensity matching score before and after matching. (A) Logit of propensity score distribution before and after matching. (B) Standardized mean difference before and after matching. LPS, logit of the propensity score; SGLT-2i, sodium-glucose cotransporter-2 inhibitor; TZD, thiazolidinedione; PLT, platelet; BB, beta blocker; ACEi, angiotensin-converting enzyme inhibitor; ARB, angiotensin II receptor blocker; HF, heart failure; PAD, peripheral artery disease; MI, myocardial infarction; LDL, low density lipoprotein; HDL, high density lipoprotein; TG, triglyceride; GGT, gamma-glutamyl transferase; GPT, glutamic pyruvate transaminase; GOT, glutamic oxalacetic transaminase; eGFR, estimated glomerular filtration rate; FBS, fasting blood sugar; Hb, hemoglobin; DBP, diastolic blood pressure; SBP, systolic blood pressure; WC, waist circumference; Bwt, body weight; Ht, height; PSM, propensity score matching.
