

Supplementary Fig. 1. Flow diagram demonstrating initial retrieval of patients according to their documented diabetes diagnosis at the time of hospital admission and before discharge, and reasons to not use data for those patients who did not fulfill the inclusion criteria or who were excluded because of the intentional reduction in patient numbers by selecting a random sample (to provide similar patient numbers in all three groups), or because an age below 18 years, missing data, or the absence of insulin therapy (in type 2 diabetes mellitus [T2DM] patients). T1DM, type 1 diabetes mellitus.
