

Supplementary Fig. 5. Percentage of profiles achieving (A) time below range ($\%TBR^{<70\text{ mg/dL}} < 4$), (B) $\%TBR^{<54\text{ mg/dL}} < 1$, and (C) $\%TBR^{<54\text{ mg/dL}} = 0$ according to a guideline suggestion (coefficient of variance [%CV] of 36%) in profiles with mean glucose ≤ 135 mg/dL (glucose management indicator [GMI] $\leq 6.5\%$), and (D) $\%TBR^{<70\text{ mg/dL}} < 4$, (E) $\%TBR^{<54\text{ mg/dL}} < 1$, and (F) $\%TBR^{<54\text{ mg/dL}} = 0$ in profiles with mean glucose > 135 mg/dL (GMI $> 6.5\%$).
