

Supplementary Fig. 1. Changes in estimated glomerular filtration rate (eGFR) during the study period in the ADD-ON group. Markers and bars represent the mean change (95% confidence interval). (A) Blue closed circles, orange closed squares, and red closed triangles represent G1 and G2 ($n=112$), G3a ($n=39$), and G3b and G4 ($n=15$), respectively. (B) Blue open circles, orange open squares, and red open triangles represent A1 ($n=94$), A2 ($n=59$), and A3 ($n=11$), respectively. ^a $P<0.05$ vs. 0 week (analysis of variance [ANOVA], followed by Tukey's *post hoc* analysis), ^b $P<0.05$, ^c $P<0.01$ for the difference between the groups (Kruskal-Wallis test, follow by Dunn's *post hoc* analysis).
