

**Supplementary Fig. 3.** Diacylglycerol acyltransferase-1 (*Dgat1*) gRNAs suppress the levels of DGAT1 expression. Representative immunoblot analysis for DGAT1 (left) and densitometry quantification of DGAT1 (normalized to levels of  $\beta$ -actin) (right) from wild-type bone marrow-derived macrophages were transduced with *Dgat1*-targeting gRNAs (*Dgat1* gRNA #1 and *Dgat1* gRNA #2), or with a control plasmid (control). All data are mean  $\pm$  standard deviation. Data are representative of three independent experiments and each carried out in triplicate. <sup>a</sup> $P < 0.01$ , by two-tailed *t*-test.
